## Projects

**CollabBots:** A collaborative robotic system, built entirely from scratch.

**SIMEA:** Simple Meshing and Engineering Analysis, is a hackable FEA tool being developed for quick prototyping and scriptable modeling & analysis of geometry.

**Object-tracking robotic arm:** Programmed to locate a cup in its radius and drop a coin into it; video from a camcorder, mounted on the arm, is processed in real-time by an FPGA which communicates with an Arduino to control the robot's actions. The system allows for calibration of thresholds to suit any environment.

**TRAECY:** Traffic and Emission Control System, aims to conjoin traffic management with real-time vehicle emission tracking & regulation, to ultimately reduce air pollution; it comprises of 3 disparate devices embedded in vehicles and street infrastructure that collect data for traffic-light control & traffic rerouting algorithms, and update users' quota.
